

Fostering European-African Partnership for
Sustainable Development in Africa
through the Use of Satellite Applications

2010 - 2011

Fostering European-African Partnership for Sustainable Development in Africa through the Use of Satellite Applications

A joint ESPI-Eurisy Project 2010-2011

Rationale

Africa is striving to implement effective instruments supporting its efforts to achieve sustainable development. Satellite applications have already demonstrated their tremendous benefit for achieving this goal - through Eumetsat, ESA TIGER Initiative, national institutions or via the UN Programme on Space Applications - but still remain largely underexploited. Two ways of improving this situation could be on the one hand, on the micro level, furthering cooperation and calibration between decision-makers, prospective and experienced users and service providers. On the other hand, on the macro level, consolidating a comprehensive strategy, coherent coordination and thorough consultation of European and African stakeholders.

This project aims to provide a forum involving the relevant stakeholders in Europe and Africa in order to ensure an optimised use of space applications for sustainable development in Africa. The first phase of this project shall therefore prepare policy objectives. The start of the Belgian EU Council Presidency in July 2010 will be a first milestone on the occasion of which first results will be presented to the public. A High Level Conference organised in September by the Belgian EU Council Presidency will put forward political conclusions on how to foster the use of satellite applications in Africa and set up a road map for concrete actions. The results of this conference should then translate into an impetus for three regional conferences in the North, the Centre and the South of Africa between autumn 2010 and autumn 2011 aimed at stimulating cooperation on the operational level and at gathering bottom-up feedback for African and European stakeholders.

Objectives

Both organisations will bring together their unique knowledge and complementary approaches to provide a forum for decision-makers, users, service providers and development experts from both Europe and Africa, in order to strengthen cooperation between European, Mediterranean and African actors in the supply and use of satellite services. Specific objectives include:

- Drafting a comprehensive strategy for European-African cooperation on satellite applications,
- Furthering coordination mechanisms on the political and operational level,
- Stimulating capacity building with regard to satellite applications,
- Inventorying users' financial and organisational needs with regard to the implementation and the use of satellite applications,
- Inventorying service provider capabilities,
- Enhancing user empowerment,
- Providing feed back to decision-makers and space infrastructure stakeholders with the objective to further the development of services in support of sustainable development policies in Africa.

Activities

A wide range of events will be conducted during 2010-2011. The series will start with three events on the European continent before two regional Conferences will be held in North and Central Africa. The final Conference will take place in Cape Town, South Africa, during the International Astronautical Congress (IAC) in October 2011.

- **10 February 2010:** European-African Roundtable (at the occasion of the UNCOPUOS Scientific-Technical Subcommittee meeting) at ESPI in Vienna
- **26 May 2010:** Workshop on drafting policy perspectives (strategy and coordination) at ESPI in Vienna
- **July 2010:** Presentation of the policy perspectives to the EU Council Presidency in Brussels
- **16 September 2010:** Conference "Space for the African citizen", organised by the Belgian EU Council Presidency
- **14-15 October 2010:** Conference "Cooperation for the development of the Mediterranean region using satellite services", Rabat (Morocco), led by Eurisy
- **April 2011:** Conference, Central Africa led by Eurisy
- **October 2011:** Conference, during the International Astronautical Congress 2011 taking place in Cape Town (South Africa), Eurisy, ESPI, IAF

The Project Partners

- The **European Space Policy Institute (ESPI)** is the European think tank for space policy. Its mission is to provide decision-makers with an independent view and analysis on mid- to long-term issues relevant to the use of space. Through its activities, ESPI contributes to facilitate the decision-making process, increases awareness on space technologies and applications with the user communities, opinion leaders and the public at large.
- **Eurisy**, the European association promoting the benefits of space for society, has substantial experience in supporting public and private actors in exploiting the benefits of satellite information and services. Through its grass-roots work with user communities Eurisy has gathered detailed knowledge about user needs and the barriers which obstruct a better exploitation of satellite services.
